

Most Advanced Automated Lubrication Management

Engineered lubrication systems are becoming a necessity, rather than a luxury, for further reducing machine downtime and maintenance costs.

EASYLUBE RFID ADVANTAGES:

The New Generation Technological Advanced Lubricator

State-of-the-Art Software Track & Manages Thousands of Lubrication Operations to Ensure Accurate, Cost-Effective Maintenance

Guardwatch Software - Tracking the specific **Grease Feed Rate** in each single lube-point on site.

Easylube® RFID guarantees lubrication with **100% accountability** – eliminating human mistakes

MQL software provides **precise calculation** on grease quantity

Electro-Mechanical operation (not spring or gas operated) – delivering sufficient pressure

24/7 Precise lubrication – **Infrared Counting** System

Unaffected by temperature fluctuations

Reusable - Filled with grease of choice

Paperless windows based Inspection & Reporting System – no more points missed!

Enhanced **safety** of personnel

Training on lubrication fundamentals to technicians

2 Year Guarantee on all Systems

Maintain Mission-Critical Knowledge Assets

Alleviate Human Factors

Maximize Staff Effectiveness

Proven increase in reliability & productivity

Experienced lubrication support, maintenance & service team

Do the math YOURSELF! We make your job easier – saving you time & money – providing excellent service!

EASYLUBE COST SAVINGS:

- **Reduce Costly Downtime and Bearing Failures**
- **Cut Soaring Energy Costs by up to 20%**
- **Eliminating** labour, unplanned downtime and excess stock items
- **Decrease** grease consumption and contamination
- Eliminate Wasted grease, cleanup & spillage

- Cut Environmental, safety or housekeeping issues
- Extended equipment & bearing life
 - Consider: Lost production & Cost to repair damage
 - Product spoilage due to contamination & downtime
 - “... EasyLube **PAYS FOR ITSELF OUT OF DIRECT COST SAVINGS WITHIN MONTHS OF INSTALLATION.**”

We help you find the Solution: Automate the lubrication process and related details by using lubrication management software & systems available from EasyLube. Put the EasyLube team on your side and benefit two ways. EasyLube uses lubrication management software – with the database you get the most comprehensive, easiest-to-use lubrication management software available. Combined, these products and services provide you with the state-of-the-art in lubrication management solutions

Helps You Do It Right

How can lubrication management software help you? Think about it It has been estimated that proper lubrication could avert 60 percent of mechanical failures in industrial equipment. Obviously proper lubrication pays off, but it’s time-

consuming and tedious to both plant managers and maintenance professionals. Even a small plant can have over a thousand lubrication points to attend, involving hundreds of different combinations of lubricant type, lube points, frequency, and method of application.

Automatic lubrication is key part of **modern maintenance programs**. For remote or hard-to-reach locations, automatic lubricators offer a **cost-effective** alternative to periodic manual lubrication with a grease gun, which can improve lubrication, to extend equipment life and service intervals while reducing overall costs associated with lubrication and equipment life cycles.

Best-of-class design contractors and owner companies insist on automatic lubrication to be part of the design specification and permanent plant operating strategy.
